
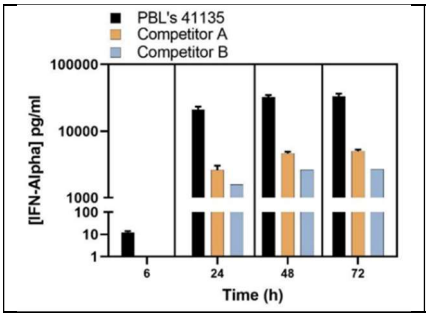
Turn Real-World Challenges into Reliable Results!

PBL Assay Science – your resource for Interferon and Cytokine Research

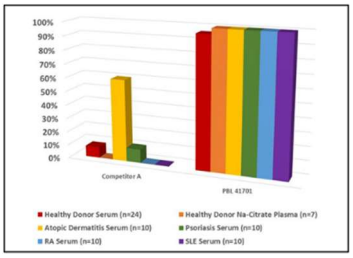
For 35 years, PBL has been the premier resource for interferon and cytokine research tools, delivering high-quality immunoassays that work in real-world conditions, recombinant proteins that have been the market standard for 35 years, and antibodies used by thousands of scientists worldwide

Measuring cytokines with ELISA can be challenging in real-world conditions—where analyte levels are often extremely low, similar proteins risk cross-reactivity, and complex matrices like serum or plasma interfere with accuracy. PBL Assay Science's ELISA kits are designed to overcome these obstacles, delivering precise and reproducible results for your most critical research applications.

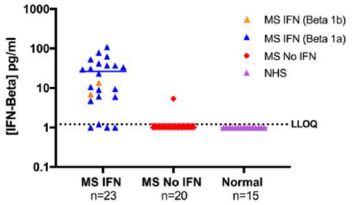
- High-Sensitivity enables low-abundance cytokines detection for better biological insights
- Exceptional Specificity for Endogenous Targets eliminate false data for reliable results
- Superior Matrix-Tolerant Performance ensure relevant results from real-world healthy and diseased samples



High sensitivity IFN-Alpha All-Subtype detection revealed early IFN-alpha expression point and total IFN-alpha concentrations that other kits missed



Real-world disease patient serum testing for endogenous IL-22 shows near-100% detectability compared to other kits that failed to detect IL-22 in disease serum



Levels of IFN-Beta quantified in normal (healthy) human sera (NHS) and Multiple Sclerosis (MS) patient sera with and without IFN treatment

	Analyte	Assay Lowest Point (LLOQ)	Specificity	Endogenous Sample Measurement
PBL 41115	Human IFN-Alpha	1.92 pg/ml	All 12 Human IFN-Alpha Subtypes	Healthy donor sera Lupus patient sera Influenza patient sera COVID-19 patient sera
Supplier A	Human IFN-Alpha	15.6 pg/ml	N/A	N/A
Supplier B kit 1	Human IFN-Alpha 1	4.68 pg/ml	IFN-Alpha 1	No data shown on healthy or patient sera
Supplier B kit 2	Human IFN-Alpha 2	187.5 pg/ml	IFN-Alpha 2	No data shown on healthy or patient sera
PBL 41415	Human IFN-Beta	1.2 pg/ml	No interference from sIFNAR2	Validated by CROs for autoimmune disease sera and IFN-Beta therapeutics
Supplier A	Human IFN-Beta	7.8 pg/ml	Interference in the presence sIFNAR2 (PBL internal comparison data)	Cell/Tissue culture Supernatant
Supplier B	Human IFN-Beta	9.38 pg/ml	N/A	No data shown on healthy or patient sera
PBL 41701	Human IL-22	0.78 pg/ml	Free IL-22	Near 100% endogenous IL-22 detectability in sera from various diseases
Supplier A	Human IL-22	15.6 pg/ml	N/A	Poor endogenous IL-22 detectability (PBL internal comparison data)
Supplier B	Human IL-22	13.12 pg/ml	N/A	No data shown on healthy or patient sera
PBL 41702	Human IL-15	0.51 pg/ml	Both free IL-15 & IL-15/IL-15Ra complex	100% healthy donor serum endogenous IL-15 & IL-15/IL-15Ra complex detectability
Supplier A	Human IL-15	15.6 pg/ml	N/A	Poor endogenous IL-15/IL-15Ra complex detectability (PBL internal comparison data)
Supplier B	Human IL-15	3.9 pg/ml	N/A	Poor endogenous IL-15/IL-15Ra complex detectability (PBL internal comparison data)

Type I Interferon research often faces practical challenges in the lab, including variability in protein activity between lots, inaccurate dosing from mass-based measurements, and cross-reactivity among subtypes. PBL Assay Science addresses these issues by providing lot-tested proteins in activity units and validated antibodies for dependable results.

- Lot-Specific Bioactivity Testing ensures consistent performance across experiments by reducing variability, giving researchers confidence in reproducible results
- Functional proteins are provided in activity units rather than mass, allowing researchers to dose based on biological potency instead than weight—critical for accurate functional studies
- Highly Specific Antibodies designed for IFN research that allow IFN-alpha all-subtype neutralization, Type I IFN signal knockdown.

		Lot-to-lot bioactivity testing of PBL's Universal Type I IFN shows cross-species applicability.	Collaborated with IFN researchers to develop fit-for-purpose Anti-human IFNLR1 antibody for Flow Cytometry (de Weerd NA, *et al.* JICR, 43(9):403, 2023	Designed to address real-world challenges such as comprehensive human Type I IFNs neutralization

With PBL Assay Science, you can trust your data and accelerate discoveries in immunology, inflammation, and translational research.

Catalog No.	Product Name	Pack Size
11100-1	Human IFN-Alpha 2a (Alpha A) Protein	> 5 x 10e6 units per vial
11105-1	Human IFN-Alpha 2b (Alpha 2) Protein	> 1 x 10e5 units per vial
11200-1, -2	Universal Type I IFN Protein	> 1 x 10e5 units per vial, > 1 x 10e6 units per vial
11415-1	Human IFN-Beta Protein, mammalian expressed	> 1 x 10e5 units per vial
12100-1	Mouse IFN-Alpha A Protein	> 1 x 10e5 units per vial
12400-1	Mouse IFN-Beta Protein	> 1 x 10e5 units per vial
21385-1	Anti-Human IFN-Alpha/Beta Receptor 2 Monoclonal Antibody, Clone MMHAR-2	50 µg
21886-1	Anti-Human IFN-Lambda Receptor 1 Monoclonal Antibody, Clone HLR14	50 µg
22100-1	Anti-Mouse IFN-Alpha Monoclonal Antibody, Clone RMMA-1	250 µg
22400-1	Anti-Mouse IFN-Beta Monoclonal Antibody, Clone RMMB-1	250 µg
39000-1	Human Type I IFN Neutralizing Antibody Mixture	0.2 ml
41100-1, -2	VeriKine Human IFN-Alpha ELISA Assay Range: 12.5 - 500 pg/ml (extended: 156 - 5,000 pg/ml)	1 x 96-well plate, 5 x 96-well plate
41105-1, -2	VeriKine Human IFN-Alpha Multi-Subtype TCM ELISA Assay Range: 12.5 - 500 pg/ml (extended: 156 - 5,000 pg/ml)	1 x 96-well plate, 5 x 96-well plate
41110-1, -2	VeriKine Human IFN-Alpha Multi-Subtype ELISA Assay Range: 12.5 - 1,000 pg/ml	1 x 96-well plate, 5 x 96-well plate
41115-1	VeriKine-HS Human IFN-Alpha All-Subtype ELISA Assay Range: 1.95 - 125 pg/ml	1 x 96-well plate
41135-1	VeriKine-HS Human IFN-Alpha TCM ELISA Assay Range: 1.95 - 125 pg/ml	1 x 96-well plate
41410-1, -2	VeriKine Human IFN-Beta ELISA Assay Range: 50 - 4,000 pg/ml	1 x 96-well plate, 5 x 96-well plate
41415-1	VeriKine-HS Human IFN-Beta ELISA Assay Range: 1.2 - 150 pg/ml	1 x 96-well plate
41435-1	VeriKine-HS Human IFN-Beta TCM ELISA Assay Range: 2.34 - 150 pg/ml	1 x 96-well plate
41701-1	VeriKine-HS Human IL-22 ELISA Assay Range: 0.78 - 50 pg/ml	1 x 96-well plate
41702-1	VeriKine-HS Total Human IL-15 ELISA Assay Range: 0.51 - 32.8 pg/ml	1 x 96-well plate
42115-1	VeriKine-HS Mouse IFN-Alpha All-Subtype ELISA Assay Range: 2.38 - 152 pg/ml	1 x 96-well plate
42120-1	VeriKine Mouse IFN-Alpha ELISA Assay Range: 12.5 - 400 pg/ml	1 x 96-well plate
42400-1, -2	VeriKine Mouse IFN-Beta ELISA Assay Range: 15.6 - 1,000 pg/ml	1 x 96-well plate, 5 x 96-well plate
42410-1, -2	VeriKine-HS Mouse IFN-Beta ELISA Assay Range: 0.94 - 60 pg/ml	2 x 96-well plate, 5 x 96-well plate
46100-1	VeriKine Cynomolgu/Rhesus IFN-Alpha ELISA Assay Range: 25 - 1,600 pg/ml	1 x 96-well plate
46415-1	VeriKine Cynomolgus IFN-Beta ELISA Assay Range: 5.47 - 350 pg/ml	1 x 96-well plate
